Sequence 28, Application US/09404026
Patent No. 656587
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Van der Bruggen, Pierre; Boon-Falleur, Thierry
APPLICANT: van der Bruggen, Pierre; Boon-Falleur, Thierry
TITE OF INVENTION: Isolated Nucleic Acid Molecules Coding For
TITE OF INVENTION: Tumor Rejection Antigen Precursor Mage-3 And Uses Thereof
NUMBER OF SEQUENCES: 30
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

MOLECULE TYPE: Genomic DNA
DESCRIPTION: retinoblastoma gene (Accession #
DESCRIPTION: M33647, J02994) nucleotides 2236 to 2247
                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Deletions of a DNA sequence in retinoblastomas and mesenchymal tumors: Organization of the sequence and its encoded
                                                                                                                                                                                                                                                                                  RESULT 112
US-08-173-489C-85/c
US-08-173-489C-85/c
Sequence 85, Application US/08173489C
Patent No. 5861244
GENERAL INFORMATION:
APPLICANT: WANG, C. -G.
TITLE OF INVENTION: GENETIC SEQUENCE ASSAY USING DNA TITLE OF INVENTION: TRIPLE-STRAND FORMATION.

Sequence 19, Application US/08501356

Patent No. 5814620

GENERAL INFORMATION:
APPLICANT: Robinson, Gregory S.
APPLICANT: Smith, Lois E.H.
TITLE OF INVENTION: Inhibition of
TITLE OF INVENTION: VEGF-Specific
TITLE OF INVENTION: VEGF-Specific
TITLE OF INVENTION: Oligonuclectides
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADDRESSEE: Lappin & Kusmer STREET: 200 State Street

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MOLECULE TYPE: Genomic DNA
DESCRIPTION: dystrophin gene (Accession # M18533,
DESCRIPTION: dystrophin gene (Accession # M18533,
DESCRIPTION: M17154, M18026) mucleotides 13280 to 13294
HYPOTHETICAL: No
ANTI-SENSE: No
ORGANISM: Homo sapiens
POSITION IN GENOME:
CHROMSOME-SENBENT: A-chromosome
MAP POSITION: X521.3-p1.1
PUBLICATION INFORMATION: AP21.3-p21.1
PUBLICATION INFORMATION: AP21.3-p1.1
AUTHORS: Koenig, M, Hoffman, E P, Bertelson, C J,
AUTHORS: Monaco, A P, Feener, C, Kunkel, L M.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 142

US-09-031-952-8/C

US-09-031-952-8/C

Sequence 8, Application US/09031952A

Patent No. 6395476

GENERAL INFORMATION:
APPLICANT: Thomas, Howard C.
APPLICANT: Summerfield, John A.
APPLICANT: Summerfield, John A.
TITLE OF INVENTION: METHODS OF PREDICTING THE OUTCOME OF INFECTION
FILE REFERENCE: Thomas
CURRENT FILING DATE: 1998-01-27
CURRENT FILING DATE: 1998-01-27
EARLIER APPLICATION NUMBER: 951539-8
EARLIER FILING DATE: 1995-07-09
EARLIER APPLICATION NUMBER: 9614414.2
EARLIER PILING DATE: 1996-07-09
EARLIER PILING DATE: 1996-07-05
SOFTWARE: PatentIn Ver. 2.0

Patent No. 561648B
GENERAL INFORMATION:
APPLICANT: Sullivan, Sean M.
APPLICANT: Draper, Kenneth G.
APPLICANT: McSwiggen, James
TITLE OF INVENTION: RIBOZYNE TREATMENT OF DISEASES
TITLE OF INVENTION: OR CONDITIONS RELATED TO LEVELS
TITLE OF INVENTION: OF IL-5
NUMBER OF SEQUENCES: 751
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADDRESSEE: Joyon & Lyon

MEDIUM TYPE: Floppy disk

COMPUTER LIBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/07/744,282C

FILING DATE: August 13, 1991

CLASSIFICATION: 435

ATTORNEY/AGENT INFORMATION:

NAME: Kevin M. Farrell

REGISTRATION NUMBER: GTR90-05

REFERENCE/DOCKET NUMBER: GTR90-05

TELEPAN: (207) 363-0558

TELEPAN: (207) 363-0558

INFORMATION FOR SEQ ID NO: 125:

SEQUENCE CHARACTERISTICS:

LENGTH: 15 base pairs

TYPE: nucleic acid

STRANBEDNESS: double

TYPE: NOPOLOGY: linear

MOLECULE TYPE: DNA (Genomic)
